

# Lab Safety/Hazardous Waste Training

**Lab  
Safety**

Persons (including faculty, staff and students) working in a lab and working with hazardous materials should receive annual training that addresses lab safety, personal protective equipment, storage, use, and disposal of hazardous materials, emergency procedures, and other safety topics specific to their workplace. Personnel must be thoroughly familiar with waste handling and emergency procedures applicable to their job responsibilities before handling hazardous waste. Departments are required to keep records of training for as long as the employee or student works in a covered job plus an additional three years. EHS also maintains training records.

**Lab Safety and Hazardous Waste training** is done in a classroom setting and is required annually. To register for the Lab Safety class, please contact Pam Koontz at [pjkoontz@utk.edu](mailto:pjkoontz@utk.edu) or 974-5084 and to register for the hazardous waste training, please contact April Case at [acase3@utk.edu](mailto:acase3@utk.edu) or 974-5084. The hazardous waste training is approximately 45 minutes and the lab safety training is approximately 1.5 hours. Anyone is invited to attend the classroom training.

For more information on Lab Safety or Hazardous Waste training including a training schedule, please visit the Environmental Health and Safety (EHS) web-site: [www.ehs.utk.edu](http://www.ehs.utk.edu).
